

# Sanjay Ghodawat University, Kolhapur

Established as State Private University under Govt. of Maharashtra. Act No XL, 2017

2017-18

M.Sc-I

School of Science

PHS504

Electrodynamics

Even II Sem

Mar 2018

Examination: ESE, Max Marks: 100, Time 3Hr

24th May 2018

Instructions:

1) All Questions are compulsory.

10:30 AM to 1:30 PM.

**Q.1 Select the correct alternative**

**Marks CO**

- |  |   |    |     |
|--|---|----|-----|
| 1. Poynting vector is  |   | 01 | CO1 |
| a) $P = \mu_0(E \times B)$   | b) $P = 1/\mu_0(E \times B)$  |    |     |
| c) $P = 1/\mu_0(E \cdot B)$  | d) $P = 1/\epsilon_0(E \times B)$   |    |     |
| 2. Faradays law states----   |   | 01 | CO1 |
| a) $\nabla \times E = \frac{\partial B}{\partial t}$                       | b) $\nabla \times B = \frac{\partial E}{\partial t}$                        |    |     |
| c) $\nabla \times H = \frac{\partial B}{\partial t}$                       | d) $\nabla \times E = -\frac{\partial B}{\partial t}$                       |    |     |
| 3. The Lienard-Weichert scalar potential is given by---                    |   | 01 | CO2 |
| a) $V(r,t) = \frac{1}{4\pi\epsilon_0} \frac{q}{(r - \frac{r \cdot v}{c})}$ | b) $V(r,t) = \frac{1}{4\pi\epsilon_0} \frac{c}{(r - \frac{r \cdot v}{c})}$  |    |     |
| c) $V(r,t) = \frac{1}{4\pi} \frac{qc}{(r - \frac{r \cdot v}{c})}$          | d) $V(r,t) = \frac{1}{4\pi\epsilon_0} \frac{qc}{(r - \frac{r \cdot v}{c})}$ |    |     |
| 4. In electrodynamics, the electric field is given by                      |   | 01 | CO2 |
| a) $E = -\nabla V + \frac{\partial A}{\partial t}$                         | b) $E = \nabla V + \frac{\partial A}{\partial t}$                           |    |     |
| c) $E = \nabla V - \frac{\partial A}{\partial t}$                          | d) $E = -\nabla V - \frac{\partial A}{\partial t}$                          |    |     |
| 5. The power radiated by the oscillating electric dipole is                |   | 01 | CO3 |
| a) $P = \frac{\mu_0 p_0^2}{12 \pi c}$                                      | b) $P = \frac{p_0^2 \omega^2}{12 \pi c}$                                    |    |     |
| c) $P = \frac{\mu_0 p_0^2 \omega^4}{12 \pi c}$                             | d) $P = \frac{\mu_0 p_0^2 \omega^2}{12 c}$                                  |    |     |
| 6. The power is radiated by the charge                                     |   | 01 | CO3 |
| a) In uniform motion   | b) In acceleration  |    |     |
| c) At rest   | d) Power is not radiated by the charge                                      |    |     |

7. Which of the following equation shows that the electric field is perpendicular to the magnetic field? 01 CO
- a)  $B(r,t) = \frac{1}{c} \hat{e} \times E$  b)  $B(r,t) = \frac{1}{c} \hat{e} \cdot E$
- c)  $B(r,t) = \hat{e} \times E$  d)  $B(r,t) = \frac{1}{c} \hat{e} \times E^2$
8. The antisymmetric tensor is represented as---- 01 CO
- a)  $t'^{\mu\nu} = \Lambda^\mu_\lambda \Lambda^\nu_\sigma t^{12}$  b)  $t'^{\mu\nu} = \Lambda^\mu_\lambda \Lambda^\nu_\sigma t^\lambda$
- c)  $t'^{\mu\nu} = \Lambda^\mu_\lambda \Lambda^\nu_\sigma t^{\lambda\sigma}$  d)  $t'^{\mu\nu} = \Lambda^\mu_\lambda \Lambda^\nu_\sigma t^\sigma$

- Q.1 B. Fill in the blanks** Marks (6) CO
- a) The Ohm's law in terms of current density is written as \_\_\_\_\_ 1 CO1
- b) Energy density of an electromagnetic wave is given by \_\_\_\_\_ 1 CO1
- c) The Lorentz condition is \_\_\_\_\_ 1 CO2
- d) The d' Alembert's operator is given by \_\_\_\_\_ 1 CO2
- e) The electric field of a point charge moving in arbitrary motion is \_\_\_\_\_ 1 CO3
- f) The Lorentz length contraction is \_\_\_\_\_ 1 CO4

- Q.1 C. State true or false** Marks (6) CO
- a) Velocity of an electromagnetic wave in the isotropic media is given by  $c = \frac{1}{\mu_0 \epsilon_0}$  1 CO1
- b) The retarded time is always less than the time at infinite distance from the charge 1 CO2
- c) The power radiated by a point charge in a circular motion is given by  $P = \frac{\mu_0 q^2 a^2 \gamma^4}{6 \pi c}$  1 CO3
- d) The radiation that leaves the charge can go to the infinity. 1 CO3
- e) The operator  $\nabla^2$  is variant under Lorentz transformations 1 CO4
- f) The scalar product of velocity with itself is  $\eta_\mu \eta^\mu = -c^2$  1 CO4

- Q.2 Answer the following questions** Marks (20) CO1

|            |    |  |                   |            |
|------------|----|--|-------------------|------------|
|            | a) | Obtain equation of continuity and explain how it is used to modify Faraday's 4 <sup>th</sup> equation or Ampere's law?               | 12                |            |
|            | b) | State and derive Poynting theorem.   | 8                 |            |
|            |    | <b>OR</b>  |                   |            |
| <b>Q.3</b> | b) | Explain boundary conditions of E, D, B and H.  | 8                 |            |
|            |    | <b>Answer the following questions</b>  | <b>Marks (20)</b> | <b>CO2</b> |
|            | a) | Obtain Gauge transformations with the help of scalar and vector potentials. Discuss Coulomb and Lorentz gauge.                       | 12                |            |
|            | b) | Show that the retarded potentials satisfy the inhomogeneous wave equations.  | 8                 |            |
|            |    | <b>OR</b>  |                   |            |
| <b>Q.4</b> | b) | Obtain Lienard-Weichert potential.   | 8                 |            |
|            |    | <b>Answer the following questions</b>  | <b>Marks (20)</b> | <b>CO3</b> |
|            | a) | Obtain the power radiated by an oscillating electric dipole.   | 12                |            |
|            | b) | Derive the relation for power radiated by a point charge at high velocity.   | 8                 |            |
|            |    | <b>OR</b>  |                   |            |
| <b>Q.5</b> | b) | Discuss the linear motion of charge particle moving with high velocity.  | 8                 |            |
|            |    | <b>Answer the following questions</b>  | <b>Marks (20)</b> | <b>CO4</b> |
|            | a) | Derive transformation equations for $E_x, E_y, E_z$ and $B_x, B_y, B_z$ by considering three frame of references $S^0, S$ and $S'$ . | 12                |            |
|            | b) | Explain the Lorentz length contraction with proper example.  | 8                 |            |
|            |    | <b>OR</b>  |                   |            |
|            | b) | Write note on relativistic momentum and energy.  | 8                 |            |
